

The City of Bethel Avenues Neighborhood Water & Sewer Improvements Project

Project Goals and Objectives

The Avenues project will extend piped water and sewer service from the Bethel Heights Water Treatment Plant to users within the Avenues neighborhood. The City of Bethel hired DOWL to complete the design and to provide construction administration services for the project. The project area map above shows the area slated to receive new piped water and sewer service. Survey and design teams will visit the neighborhood during spring and summer 2020 to locate utilities and develop plans for service connections. In the coming year, The City and DOWL will reach out to eligible property owners to discuss water and sewer service pipe locations.

Several public meetings will happen throughout the project process.

Please check the project website at www.BethelAvenuesWaterandSewer.com for updated information.

Design and Construction Schedule

January—May 2020
Survey Work and Geotechnical Investigations

May—September 2020
Public Meetings

July 2020—February 2021
Easement and Service Agreements

December 2020
Design Complete

May 2021
Construction Starts
